800V high-voltage technology is driving the EV industry to new heights. It not only accelerates charging efficiency but also revolutionizes vehicle performance and energy utilization.

Beyond vehicles, 800V SiC inverters are expanding into renewable energy storage, industrial motor drives, rail electrification, data centers, and high-power charging for non-automotive ...

Discover how 800V high-voltage platforms and SiC Inverters boost efficiency, charging speed, and range in next-generation commercial electric vehicles.

Unlike traditional 400V systems, 800V fast charging doubles the voltage, significantly reducing charging times while improving energy efficiency. This technology, adopted by leading ...

Simple and efficient 400V/800V EV fast-charging compatibility using scalable, bidirectional, high density power modules. Explore Vicor solutions for automotive applications.

To address these challenges, Motion Applied has developed a next generation, 800V Silicon Carbide (SiC) inverter platform. 800V offers faster vehicle charging speeds and Silicon Carbide technology ...

Hyundai stated that its Integrated Charge Control Unit (ICCU) is the world's first patented technology that elevates the voltage from 400 V to 800 V through the motor and inverter, enabling stable ...

It converts Direct Current (DC) from the battery to Alternative Current (AC) to power the electric Motor. It can also be used in reverse mode to charge the battery by transforming kinetic ...

Our high-voltage booster is a classic resonant converter that elevates the voltage of the charging station from 400V to 800V. It is available in power classes between 50kW and 150kW. Due to its special ...

This 10 kW bi-directional onboard charger and DC-DC combo is designed for the 800 V platform and can be

used on OEM"s premium BEV platform.

800v high voltage fast charging inverter
