-----

We offer advanced solutions for battery pack and module testing, including containerized and modular test systems. Our technology measures all critical parameters under various environmental ...

We partner with customers on test process development and integration to provide an automated test system tailored to maximize efficiency and effectiveness for battery production requirements. Our ...

The system enables real-time acquisition and analysis of battery temperature, voltage, and current, with automated generation of detailed test reports. With intelligent coordination, a single client can control ...

Maccor's Battery test systems are chemistry agnostic and perfect for all your testing needs. Whether you want to test small coin cells or large EV batteries, we have a tester to meet your needs.

Integrated systems to automatically test, control, & monitor the performance of battery cells, packs and modules for electric and hybrid electric vehicles.

All Arbin battery test equipment is safe and robust with multiple layers of safety protections and dedicated microcontrollers for each channel module. Comprehensive options and accessories are ...

The system delivers high power testing capability even in space- limited environments. A single cabinet achieves a maximum power density of 106kW/m<sup>3</sup>; while weighing only 740kg, minimizing footprint and ...

The BMS and the battery pack end of line test system can be widely used in battery pack production lines, providing a programmable software platform and customized test items to efficiently verify ...

Our test solutions are designed to test battery cells, modules, packs and battery management systems for e-mobility, mobile, industrial, and stationary use.

## Battery cabinet automatic testing system

All our products are part of a modular platform, so they can be readily adapted to your application needs - from the development and manufacturing of a battery emulator to a test system for battery packs ...
