How much do solar panels cost?

As of 2026, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much do solar panels cost in 2025?

In 2025, panel prices range from \$2 to \$3 per watt, depending on the brand and conversion efficiency. Higher-quality, more efficient panels come with a higher upfront cost but will yield better long-term performance. Labor, permitting, and inspection costs also significantly impact the total system cost.

Why do solar panels cost so much?

The size of your solar power system, measured in kilowatts (kW), is the most important factor affecting solar panel prices. Naturally, larger systems cost more than smaller ones, but they usually offer a lower cost per watt. Solar panels typically account for 12 - 18% of the total installation cost.

How much does a residential solar system cost?

Here, we'll break down every factor so you can move forward with confidence and understand the true value of your investment. While prices vary, the average cost to install a residential solar system in the U.S. in 2025 typically ranges from \$17,000 to \$35,000 before any tax credits or incentives are applied.
