It can be difficult to draw the line between a ground-based SIGINT receiving station, and facilities that have control, coordination, and processing functions in the "bigger picture" of signals intelligence. Many stations, for the countries with stations in many parts of the world, do have both aspects. There are also some that are clearly intercept only. The first signals intelligence platforms were listening stations on the ground. Early tactical stations wer...

The current (2019) Joint Military Communications Ground Station (JMCGS) is a SIGINT intercept facility located at Kojarena appx 15 Mi east north east of Geraldton, Western Australia.

It is the world's first signal processing satellite equipped with a land-space 5G operating system. Leveraging the wide coverage of the satellite, the base station it carries can transmit 5G ...

One day after April Fools' Day 2018, China's first space station hurtled through the atmosphere. Most parts were burnt up during the process, but parts of it fell into the ocean.

The first crewed mission, Shenzhou 9, arrived at Tiangong 1 in June 2012. Shenzhou 8 and 9 were, respectively, China's first uncrewed and crewed space docking. Shenzhou 10, the last crewed flight ...

China has revealed the world's first mobile 5G base station, a cutting-edge development set to transform military communications.

Like a scene straight out of a spy movie, where the next base station could take any form, and you'd never see it coming. Unbeknownst to many, these camouflaged base stations play a pivotal role in ...

# China s first communication signal base station

Using real-world data from over 49,000 base stations in Anhui Province and extending the model to a national scale, the researchers evaluated three future development scenarios.

Find the most up-to-date statistics and facts about the 5G technology development in China.
