Germany has launched the world's first floating solar power plant that uses vertical panels, a pioneering project that redefines the potential of renewable energy.

German engineers have built a suitcase-sized hydro generator that powers 12 homes using just a small stream -- no dams, no grid, no fuel. Drop it in water and get 5 years of clean ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.

The first of its kind, this study offers an overview of the photovoltaics and battery storage market in Germany. It provides the latest statistics on the PV market and battery storage systems, along with ...

Germany's current largest solar installation, located in Saxony, went into operation in spring 2024 with a capacity of 162 megawatts (MW). At the end of 2024, installed solar capacity in ...

Meta Description: Discover how German engineering dominates solar generator production with cutting-edge technology, real-world case studies, and 2023 market data. Learn why "Germans make solar ...

OverviewHistoryGovernmental policiesStatisticsCompaniesSee alsoExternal linksSolar power accounted for an estimated 15% of electricity production in Germany in 2024, up from 1.9% in 2010 and less than 0.1% in 2000. Germany has been among the world's top PV installer for several years, with total installed capacity over 100 gigawatts (GW) in 2025, up from 81.8 GW at the end of 2023. Germany's 974 watts of solar PV per capita (2023) is the third hi...

Concentrated solar power (CSP), a solar power technology that does not use photovoltaics, has virtually no significance for Germany, as this technology demands much higher solar insolation.

Germany s new generation of solar generators

Saturday, January 25, 2025: The Market Master Data Register (MaStR) officially announced recorded 100 gigawatts (GW) of installed photovoltaic power generators. Bottom line, the ...

A key aspect of Germany"s green energy transition will be the use of solar photovoltaic (PV) technology. In this blog, we will be looking at the recent developments in Germany"s PV ...

Germany added almost 20 GW of new wind and solar power generation capacity, with total installed renewables capacity pegged at around 190 GW, regulator BNetzA said late Jan. 8.
