Description The LM723 is a monolithic integrated programmable voltage regulator, assembled in 14-lead dual in-line plastic package. The circuit provides internal current limiting. When the output current ...

TI's TPS7A89 is a 2-A, low-noise, high-accuracy, dual-channel adjustable ultra-low-dropout voltage regulator. Find parameters, ordering and quality information.

The TPS7A33 family is designed using bipolar technology primarily for high-accuracy, high-precision instrumentation applications, where clean voltage rails are critical to maximize system performance.

With four buck regulators and five LDO output channels, the MC34VR500 powers more than the network processor, significantly reducing design complexity and the overall bill of materials. Highly integrated ...

A variable power supply provides precise, adjustable voltage and current for circuit testing, device validation, and troubleshooting. With clean, stable output and real-time control, it ensures accurate, ...

The NCP785A is a high-performance $>10\text{mA}$ linear regulator, offering a very wide operating input voltage range of up to 450 V DC operating and 700V DC maximum is an ideal choice for high input voltage ...

Explore our robust, reliable voltage regulators, with military-qualified options per MIL-PRF-19500 standards for precise voltage regulation in harsh environments.

Our PMICs offer multiple voltage regulators and control circuits in a single chip.

The LT3097 is dual, positive and negative, high-performance, low-dropout linear regulator featuring Analog Devices, Inc., ultralow noise and ultra-high power supply rejection ratio (PSRR) architecture ...

With 1% output voltage accuracy (over line, load, and temperature) and soft-start capabilities to reduce inrush

High-precision portable multi-channel voltage regulator

current, the device is designed for powering sensitive analog low-voltage devices. For all ...
