The battery energy storage system (BESS) subsidiary of Canadian utility Hydro-Quebec, EVLO Energy Storage, has announced its first project in the US. The company operates several ...

We produce high-efficiency, reliable new energy battery, offering sustainable solutions for home and industrial use worldwide.

To complete these improvements while continuing to supply uninterrupted electricity to Parent residents and businesses, grid supplier Hydro-Quebec's subsidiary EVLO deployed a 4-MW / ...

Our research has lead to patented solutions that will be used to build a battery that is safer, more efficient, more durable, and both easier and less costly to build and to recycle. The Center's efforts ...

Close to 18,000 students enrolled in battery manufacturing-related programs (chemistry, chemical engineering, electrical engineering, mechanical engineering, physics engineering)

Hydro-Quebec and EVLO teams have demonstrated their great innovation skills to ensure the system's capability to run for up to 16 consecutive hours without any service interruption.

Hydro-Quebec's Center of Excellence in Transportation Electrification and Energy Storage is a world-class innovation hub in the field of battery materials for electric vehicles and other energy storage ...

Our manufacturing processes will penetrate the automobile market for manufacturers planning to incorporate battery cell production into their industrial production lines. They will also help battery cell ...

Hydro-Quebec is involved in developing and marketing materials for electric vehicle batteries.
