Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

Current installed wind generation capacity in the U.S. is roughly 152 gigawatts (GW), according to the U.S. Energy Information Administration (EIA). That capacity is up 46% from 2019, ...

While global growth slightly slowed, the steady and inspiring rise of wind power in countries like China and Brazil gives us renewed optimism. China, in particular, has shown ...

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and ...

Year-on-year percentage change in wind electricity production comparison between November 2024 and November 2023 - Chart and data by the International Energy Agency.

In 2019, wind power surpassed hydroelectric power as the largest renewable energy source in the U.S. In March and April of 2024, electricity generation from wind exceeded generation from coal, once the ...

The year's growth, 109GW from onshore wind and 8GW from offshore, has pushed total global wind capacity to 1,136GW, now spanning every continent. In 2024 alone, wind turbines were installed in ...

Explore the tabs above to see interactive maps and charts of annual growth, cumulative installations, and share of generation by state and region. For more information on land-based wind energy from ...

Change in energy generation relative to the previous year, using the substitution method and measured in terawatt-hours.

In 2024, the total wind power capacity installed worldwide surpassed 1.1 terawatts, growing by more than 100

Last year s wind power generation

gigawatts in comparison to the previous year. China is the leading country ...
