Energy storage has become the critical frontier in the clean energy transition, with lithium-ion leading but new technologies racing to fill its gaps.

But China's power sector reforms helped to fuel stronger than expected demand for lithium used in batteries for power system storage in the second half of 2025, supporting a cautiously...

The US flow battery startup Quino Energy aims to repurpose old oil tanks for low cost, long duration clean energy storage.

Lithium-ion batteries have become the dominant energy storage technology due to their high energy density, long cycle life, and suitability for a wide range of applications.

Discover how lithium - the powerhouse behind energy storage systems - is driving the renewable energy revolution. The global shift toward renewable energy is picking up speed as we work to curb climate ...

Executive summary Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market Battery storage in the power sector was the fastest ...

Global battery research is redefining energy storage through new chemistries, safer designs, and scalable technologies worldwide.

A big opportunity for sodium-ion batteries Lithium-ion batteries are the default chemistry used in EVs, personal devices, and even stationary storage systems on the grid today.

Breakthroughs in battery technology are transforming the global energy landscape, fueling the transition to clean energy and reshaping industries from transportation to utilities. With demand ...

Lithium battery energy storage is the new oil

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.
