---

Solar energy accounted for 5.6% of electricity generation in the United States in 2023, up from a 4.8% share a year earlier. California was the state with the largest renewable energy ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Over the past 12 months, solar photovoltaic sources accounted for more than 6.8% of all electricity generated in the U.S., up from 5.5% in 2023, a 24% year-over-year increase, according to ...

Solar accounted for 66% of all new electricity-generating capacity added to the US grid in 2024, as the industry continued experiencing record growth. Domestic module manufacturing ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing percentage of the U.S. electric generation mix. In 2024, solar represented ...

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide

# Proportion of the share of solar panel electricity generation

renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...
