According to the report, 77% of new solar capacity installed this year so far came from states across the South and Midwest; Texas, Indiana, Arizona, Florida, Ohio, Missouri, Kentucky, and...

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.

The solar sector is an incubator for job growth across the United States. Over the last decade, employment figures in the U.S. solar market have increased nearly threefold.

The following table ranks the best and worst states for solar energy production (shown in thousand megawatt-hours) in October and November, number 1 represents the best state for solar energy production.

Below is a breakdown of solar capacity development and generation trends in key U.S. states. California remains the top state in terms of solar generation capacity, with just over 20,482...

The State of Renewable Energy dashboard tracks progress in solar, battery energy storage, wind, and EV adoption across the 50 states.

Chart: Which US states generate the most solar and wind energy? A new report tracks how renewable energy is transforming the nation's electricity mix, state by state.

Find out which states are leading the way in solar electricity generation, and why they're doing so well while some other states fail to meet their potential.

Explore your state's renewable energy progress, then read below for more information on the benefits of clean energy ... and what local and state governments can do to help accelerate the transition to ...

Solar power generation status in the states

Explore the latest solar market insights and policy updates in all 50 states and Washington, D.C. All market data is current through Q3 2025. California leads as the top solar state. With over 54 GW of solar installed, ...
