Once a server gets beyond about 5 years, it gets difficult to get a service contract, replacement/upgrade parts etc. And it becomes more expensive to operate compared to equivalent new servers.

Servers equipped with HVDC power supplies reduce total power consumption, reduces heat, increase power feed reliability and decrease maintenance requirements.

It is important to note that, while IT equipment is replaced every 3 - 5 years, the actual longevity of a server can be up to 8 years if properly maintained and a reasonable load is demanded ...

For the rest of the world, three-phase power distribution is 400V (Europe and most of Asia) and 415V (Australia). Since the maximum voltage conventional IT equipment accepts is 240V, it will be the job ...

The Rack Server Market in Spain is witnessing growth as organizations seek efficient solutions to maximize space utilization in their data centers. Rack servers offer scalability and flexibility, making ...

Choose from a complete portfolio of 1-2-and-4 socket rack servers to deliver high core density for your traditional applications, virtualization and cloud-native workloads.

Our study defines the Spain data center rack market as all new, factory-built steel or aluminum enclosures, open frames, and wall-mount racks that host IT equipment inside Spanish ...
