In the last few years, solar energy has been the main driver for renewable energy growth worldwide. In 2024, solar photovoltaic capacity additions surpassed 600 gigawatts, accounting for ...

Solar photovoltaic (PV) uses electronic devices, also called solar cells, to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an ...

Solar PV accounted for 5.4% of total global electricity generation, and it remains the third largest renewable electricity technology behind hydropower and wind.

We are focusing our efforts on the fast-growing solar, onshore wind and offshore wind segments, leveraging the many advantages that these abundant, clean, flexible, efficient and competitive ...

The world generated 2,109.76TWh of electricity from solar PV in the first nine months of the year, more than the total solar generation reported in 2024.

According to the International Energy Agency, 2024 has been marked by a robust growth in global total electricity generation: 1,207 TWh (4%), owing to accelerating electrification of ...

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

Total solar photovoltaic power generation

Learn about solar power benefits, installation processes, and how to maximize energy efficiency for a sustainable future
