Why should you install a UPS system in a substation?

With UPS installations in plants and substations, you can guard against downtime throughout your entire infrastructure. Avoid the irony of a power plant without power with uninterruptible power supplies to ensure the continuity of the utility's supply and minimize disruptions.

What is an uninterruptible power supply?

Uninterruptible power supplies provide power to critical loads in the event of a power failure. Unlike emergency generators, UPS systems provide power immediately, but only for a short period of a few minutes - until a backup power supply comes online or until the load completes its shutdown sequence.

Why should your business use an uninterruptible power supply (UPS) system?

As a result, your business will be able to operate and remain open 24 hours a day, 365 days a year. BETTER DOESN'T HAVE TO MEAN BIGGER. Our uninterruptible power supply (UPS) systems deliver exceptional power density, quality, reliability and efficiency. They exhibit technical excellence while occupying minimal floor space.

What are the requirements for power supplies and ups in critical infrastructures?

Specific requirements for power supplies and UPS systems in critical infrastructures concern reliability, robustness, and security: UPS systems ensure an uninterrupted power supply during power outages and enable an orderly shutdown of systems during prolonged outages.

Uninterruptible power supplies provide power to critical loads in the event of a power failure. Unlike emergency generators, UPS systems provide power immediately, but only for a short period of a few ...
