In the report "User-Side Energy Storage Market and Policy Analysis," Sun Jiawei, Senior Research Manager at the China Energy Storage Alliance, pointed out that as of the end of June 2025, ...

In the presence of the unaffordable high configuration cost of energy storage system for a single user, an optimal capacity model of user side shared energy storage power station was proposed.

In this study, the author introduced the concept of cloud energy storage and proposed a system architecture and operational model based on the deployment characteristics of user-side energy storage devices.

To address these challenges, this study proposes a user-side cloud energy storage (CES) model with active participation of the operator. This CES model incorporates adjustable time-of-use (TOU) electricity ...

By utilizing CVaR, this study offers practical solutions to optimize user-side energy storage investments, enabling investors to maximize returns while minimizing losses.

To improve the utilization of distributed power storage and increase its economic benefits, we propose a user-side distributed power storage sharing strategy.

With the high penetration of distributed power sources into the power grid, the role of user side energy storage as a way to alleviate the randomness, volatility and other output characteristics of distributed power sources ...

Abstract This paper addresses the management and operational challenges posed by installing distributed photovoltaic (PV) and energy storage resources for industrial, commercial, and residential ...

In this paper, a dual-layer optimal configuration method of user-side energy storage system is proposed, which considers high reliability power supply transaction models and capacity markets.
