For 3 to 20 turbines, the municipality, province, or central government first assesses whether a mer is required. You can also choose to make a mer assessment yourself.

The Triflex Towersafe is a specially developed solution designed to waterproof the entire wind turbine, including the tower, foundation, rotor blades and nacelles.

Solutions for waterproofing and protecting the foundations of onshore wind turbines using polyurethane, cement-based, polyurea-based or silane-terminated polymer membranes.

Many small scale wind farms exist throughout the Netherlands which bear testament to earlier models of wind turbines and lesser known manufacturers which provided a range of niche products, ranging in ...

To strengthen the international awareness of the solutions and innovative competences of Dutch businesses within offshore wind energy, the wind industry and the Netherlands Enterprise Agency ...

In this annual flagship publication, the public-private partners in the wind & water works campaign provide you with comprehensive overviews of the Dutch regulatory framework and Dutch supplying ...

This blog explores the critical design requirements for waterproof connectors in the renewable offshore wind industry and how Meritec helps future-proof these installations.

The unique Dutch North Sea Agreement brings together all marine stakeholders with binding rules to plan space at sea more sustainably. Public consultations for offshore wind farms are compulsory, all ...

Placing wind turbines at sea has several advantages over onshore wind turbines. Offshore, wind speeds are higher and more consistent, so the production per wind turbine is generally higher.
